

CARVEWRIGHT™

WOODWORKING SYSTEM

EDUCATIONAL PROGRAM

Easy to Use

The Machine is easy to use, safe, compact and durable. This revolutionary high-tech CNC is not just fast, but rugged. It can run continuously for many hours on one job, or handle multiple shorter projects. Its compact 15"x18"x26" footprint takes up very little room in your workshop, yet can handle remarkably large projects. An auto-off safety switch is designed to turn off the motor when the cover is lifted; helping to keep students safer in the workshop.

In The Classroom

The CarveWright Woodworking System is being used in hundreds of classrooms from middle schools to universities all across the United States. From small individual projects such as signs, to large group projects such as fundraising; the CarveWright offers you the opportunity to introduce an inexpensive CNC into your classroom. The machine and software merges technology with craft incorporating computer graphics design, automated manufacturing, woodworking and artistic skills into one fun and exciting package for your students.

With the CarveWright, it does not matter if you teach S.T.E.M. classes or traditional manufacturing classes, it fits right in. It is a great way to bring innovative technology into the classroom.

*-Terry Zimmerman, Friendswood High School
Friendswood, Texas*

The Software works on both PC and Mac and provides a 3-dimensional view of your design board. It offers the same familiar look and feel of major software products and features the same operational functions as most major design software. With drag and drop ease, projects can be designed and carving within minutes. Knowledge of complicated programming languages is not required, nor do you need to be an artist. CarveWright is safe, affordable and fun for everyone!

EDUCATIONAL PROGRAM

Educational Packages

We are now offering specially bundled educational packages designed for the classroom setting. Each package, whether single or dual machines, comes with all of CarveWright's Accessories including the Full Bit Set, Scanning Probe and Centerline text, multiple memory cards, readers and bits at a discount from individual prices. The Designer Software is included and offers up to five installs per license. Additional licenses are available.

Typically, CNC can be very expensive and difficult to learn. When Arizona decided to include CNC machines in the Woodworking State Standards, I didn't know what we would do. CarveWright was a perfect solution. It doesn't cost much and is very easy to use. My students are really enjoying what they can do with this machine.

*-Tom Bockman, Prescott High School,
Prescott, Arizona*

Educational Program

Based on materials developed by actual technology educators, the CarveWright Educational Program is a multimedia CD, which includes everything you need to teach the basics of woodcarving on the CarveWright Woodworking System. It features a Teacher's Curriculum Guide complete with lesson plans, objectives, and associated hand-out materials to be used in conjunction with an attention grabbing and engaging PowerPoint Presentation. It was created to be "standards flexible", so that any educational institution can adapt it to their state requirements. Whether teaching middle school or technical college students, the curriculum is designed to be as basic or as advanced as deemed necessary by your classroom requirements.

CarveWright Educational Packages are only available through LHR Technologies and their authorized educational distributors. The Educational Program is free only with the purchase of an Educational Package. Purchase Orders are accepted from schools or related educational institutions. Locate your states educational distributor at www.carvewright.com.
